

GLENEITH
BORDER LEICESTER STUD
GANMAIN 2702

14th ANNUAL
ON-PROPERTY SALE
Friday, October 13, 2017
“GLENEITH PARK” GANMAIN

Commencing at 11.00am

Inspection from 9.00am or by appointment
Morning tea and light luncheon available

Percentile Report

Analysis **Mat-1st X Sire Breed** Dated **15-Aug-17**

Animals born in **2016** Count **13060**

SHEEP GENETICS

HISTORY

THE “Gleneith” Border Leicester Stud was originally established by Fred Kember Snr in 1922. However official Breed Society registration was not sought until 1932 (F665). The stud grew from small beginnings to around 400 ewes being put to the rams in 1944. In 1948 with the death of Fred Kember Snr. the flock slipped from registration. Fred Kember Jnr. purchased the flock from the estate in 1950 and had the flock re-registered with the same prefix of “Gleneith” but with the current flock number (F1929).

Fred Jnr continued breeding Border Leicesters with ewe numbers generally between 300-400. He regularly took his show team to the local shows and also showed at the Albury Sheep Show, which was held in the old Wool Store and then for a few years at the Albury Show Ground. In 1995 the stud incorporated all family members with Will and Wes continuing the stud tradition. Nathan is now the fifth generation of the Kember family to be actively involved in all areas of stud management and in 2004 we held our inaugural on property sale.

Superborder\$ is the brand name for high performing Border Leicesters that have been bred in quality stud flocks and are ranked above average for the breed by Lambplan. The Superborder\$ name is trademarked so that only sheep bred to strict standards may be sold as Superborder\$. To qualify to be a Superborder\$ ram they must have an index above the breed average on August 15th run date and meet individual EBV cut off gates.

THE BLX INDEX

The Border Leicester Cross index is modelled on a production system using sires crossed to merino dams producing first cross progeny. The index identifies high early growth animals with a significant response in post weaning weight and maternal ability. It also aims for an improvement in carcass eye muscle depth and number of lambs weaned. There is a small improvement in fleece weights. The index also recognises the importance of capping adult weight over time. This index allows for the fact that 50% of the 1st cross performance comes from the Border ram. An index of 100 is given as the average for the breed when recording first started. Every point above 100 indicates \$1 extra income from each ewe joined.

An index of 120 indicates that the ram will produce \$20 extra lamb value for every ewe joined. In a working lifetime of 4 years, a ram will produce 200 progeny, the extra value by that ram is \$20 times 200 = \$4000.

HEALTH STATUS

Gleneith Stud has obtained OJD MN3v status and all our rams have been vaccinated with Guidar vaccine and are approved vaccinates. We are Ovine Brucellosis Accredited Free Flock and Foot Rot Free.

STUD RAMS

Any ram within the sale catalogue can be purchased as a stud ram, with the following criteria.

- A minimum price of \$1500 will apply to a ram purchased as a stud ram
- Must be notified to the auctioneer on the fall of the hammer.

KEY

- BT:** Birth Type, single twin or triplet
BWT: Birth Weight
MWWT: Maternal weaning weight; related to milking ability of the female progeny
WWT: Weaning weight; (with MWWT relevant to the sucker industry)
PWWT: Post weaning weight; a good indicator of the lamb's ability to grow after weaning to market weights
PFAT: Post weaning fat
PEMD: Post weaning eye muscle depth
YGFW: Yearling greasy fleece weight
NLW: Number of lambs weaned
INDEX: Sum total of all of the above, collated to a general lamb/ first cross index.
\$: Signifies \$superborder\$
Acc: Accuracies for EBVs as a percentage
 Shaded box represents top 10%

LAMBPLAN EBVs are calculated from raw data collected by breeders and accredited LAMBPLAN operators. LAMBPLAN does not oversee or audit the collection of this data and therefore neither LAMBPLAN nor Meat and Livestock Australia accept any responsibility for the accuracy of the data. LAMBPLAN EBVs are designed to give the best possible estimate of true genetic merit from that data, i.e., the estimate that maximises the correlation between EBVs and true genetic merit. EBVs can only be compared between flocks or between management groups within a flock when a pedigree link exists and that link is used.
