

BORDER LEICESTER STUD

17th ANNUAL
ON-PROPERTY SALE

Friday, October 9, 2020
“GLENETH PARK” GANMAIN

Commencing at 11.00am

Inspection from 9.00am or by appointment
Morning tea and light luncheon available

**OFFERING 120 FLOCK RAMS
ABOVE AVERAGE ON BLX INDEX**

www.gleneith.com.au
wkember@activ8.net.au

This Sale will be
Covid-19 Compliant

SHEEP GENETICS

HISTORY

THE "Gleneith" Border Leicester Stud was originally established by Fred Kember Snr in 1922. However official Breed Society registration was not sought until 1932 (F665). The stud grew from small beginnings to around 400 ewes being put to the rams in 1944. In 1948 with the death of Fred Kember Snr. the flock slipped from registration. Fred Kember Jnr. purchased the flock from the estate in 1950 and had the flock re-registered with the same prefix of "Gleneith" but with the current flock number (F1929).

Fred Jnr continued breeding Border Leicesters with ewe numbers generally between 300-400. He regularly took his show team to the local shows and also showed at the Albury Sheep Show, which was held in the old Wool Store and then for a few years at the Albury Show Ground. In 1995 the stud incorporated all family members with Will and Wes continuing the stud tradition. Nathan is now the fifth generation of the Kember family to be actively involved in all areas of stud management and in 2004 we held our inaugural on property sale.

THE BLX INDEX

The Border Leicester Cross index is modelled on a production system using sires crossed to merino dams producing first cross progeny. The index identifies high early growth animals with a significant response in post weaning weight and maternal ability. It also aims for an improvement in carcase eye muscle depth and number of lambs weaned. There is a small improvement in fleece weights. The index also recognises the importance of capping adult weight over time. This index allows for the fact that 50% of the 1st cross performance comes from the Border ram. An index of 100 is given as the average for the breed when recording first started. Every point above 100 indicates \$1 extra income from each ewe joined.

An index of 120 indicates that the ram will produce \$20 extra lamb value for every ewe joined. In a working lifetime of 4 years, a ram will produce 200 progeny, the extra value by that ram is \$20 times 200 = \$4000.

HEALTH STATUS

Gleneith Stud has obtained OJD MN3v status and all our rams have been vaccinated with Guidar vaccine and are approved vaccines. We are Ovine Brucellosis Accredited Free Flock and Foot Rot Free.

SEmen RETAINED

Gleneith has collected semen from Lot 4 282-19 and retains the right to use or sell at their discretion.

SUPERBORDERS

\$uperBorder\$ is the brand name for Border Leicester Rams that are of high genetic merit for a first cross production system. The official \$uperBorder yellow ear tags allow \$uperBorder rams to be easily identified.

To qualify as a \$uperBorder a Border Leicester ram must be above the 50th percentile for the breed based on the BLX index (Border Leicester Cross Index). The 50th percentile index value is calculated based on the 15th of August LAMBPLAN run each year. It is used to determine \$uperBorder rams for that selling season. The BLX Index has been developed for production systems using Border Leicester sires crossed to Merino dams to produce first cross progeny. BLX balances maintaining mature size with significant improvements in early growth and reproduction. A higher BLX index targets animals that are more profitable in this production system.

Not all rams sold by \$uperBorder members are necessarily \$uperBorder quality, but are bred by committed, registered breeders striving for genetic gain. \$uperBorder rams must be structurally sound and of good breed type.

The \$uperBorder\$ group is made up of a number of studs across 5 states who work together in meeting market requirements for objectively measured maternal genetics in the Australian Lamb Industry. \$uperBorder\$ members are industry leaders with longstanding involvement in research, trials and industry resource flocks.

First cross lambs sired by 100% \$uperBorder rams may be sold as 'Bred from \$uperBorder\$'. Special yellow pen cards and \$uperBorder\$ ear tags are available to identify these animals when sold in physical sales. Virtual yellow sale cards are also available for \$uperBorder\$ progeny sold on online sale platforms. Please speak with us if you would like either of these marketing materials.

and settling on their behalf within 7 days.*

STUD RAMS

Any ram within the sale catalogue can be purchased as a stud ram, with the following criteria.

- A minimum price of \$2000 will apply to a ram purchased as a stud ram
- Must be notified to the auctioneer on the fall of the hammer.

KEY

BT: Birth Type, single twin or triplet

BWT: Birth Weight

MWWT: Maternal weaning weight; related to milking ability of the female progeny

WWT: Weaning weight; (with MWWT relevant to the sucker industry)

PWWT: Post weaning weight; a good indicator of the lamb's ability to grow after weaning to market weights

PFAT: Post weaning fat

PEMD: Post weaning eye muscle depth

YGFW: Yearling greasy fleece weight

NLW: Number of lambs weaned

INDEX: Sum total of all of the above, collated to a general lamb/ first cross index.

\$: Signifies \$uperborder\$

Acc: Accuracies for EBVs as a percentage

Shaded box represents top 10%

LAMBPLAN EBV's are calculated from raw data collected by breeders and accredited LAMBPLAN operators. LAMBPLAN does not oversee or audit the collection of this data and therefore neither LAMBPLAN nor Meat and Livestock Australia accept any responsibility for the accuracy of the data. LAMBPLAN EBV's are designed to give the best possible estimate of true genetic merit from that data, i.e., the estimate that maximises the correlation between EBV's and true genetic merit. EBV's can only be compared between flocks or between management groups within a flock when a pedigree link exists and that link is used.
